

# **CYBER SECURITY TASK 02**

## **PART F: MINI SECURITY CONSULTANT ACTIVITY**

**NAME : BHAKTI MAHADEV PARHAD**

### **Cybersecurity Improvement Report for K.K.Wagh Education Society, Nashik College**

#### **Introduction :**

Cybersecurity is essential for protecting the college's sensitive information, maintaining the availability of academic services, and ensuring a safe digital environment for students, faculty, and staff. After assessing the college's current security risks, the following key findings and recommendations are provided to strengthen its cybersecurity posture.

#### **Top 5 Risks :**

1. **Data Breach of Student Records** – Unauthorized access to confidential student information could result in privacy violations and identity theft.
2. **Phishing Attacks** – Fake emails or messages may trick students or staff into revealing passwords or sensitive information.
3. **Malware and Ransomware Attacks** – Malicious software can encrypt or steal important data, causing disruption to academic and administrative operations.
4. **Weak Passwords** – Simple or reused passwords increase the risk of unauthorized access to college accounts and systems.
5. **Unpatched Systems** – Outdated software may contain known security vulnerabilities that attackers can exploit.

#### **Top 5 Recommendations :**

1. Enable Multi-Factor Authentication (MFA) for all staff and student accounts to strengthen account security.
2. Keep Systems Updated by regularly installing security patches and software updates.
3. Conduct Cybersecurity Awareness Training to educate students and employees about phishing, password security, and safe online practices.

4. Implement Regular Data Backups to ensure critical information can be restored after accidental loss or ransomware attacks.
5. Strengthen Access Control by granting users only the permissions required for their roles and regularly reviewing access privileges.

### **Expected Benefits :**

Implementing these recommendations will significantly improve the college's cybersecurity by reducing the risk of cyberattacks, protecting sensitive student and faculty data, improving system reliability, minimizing downtime, and ensuring faster recovery from security incidents. These measures will also increase trust among students, parents, faculty, and other stakeholders while supporting a secure learning environment.

### **Conclusion :**

A proactive approach to cybersecurity is essential for educational institutions. By addressing the identified risks and implementing the recommended security measures, the college can build a stronger security posture, protect valuable information assets, and maintain uninterrupted academic and administrative services.
