

CYBER SECURITY TASK 02

PART E: SECURITY RECOMMENDATIONS

NAME : BHAKTI MAHADEV PARHAD

Security Recommendations for a College :

Based on the risk assessment, the following security recommendations can help protect the college's systems, data, and network infrastructure from common cyber threats.

Recommendation	Why It Is Important
1.Enable Multi-Factor Authentication (MFA)	Adds an extra layer of security by requiring more than a password, reducing the risk of unauthorized account access.
2. Regular System Updates and Patch Management	Fixes known software vulnerabilities that attackers could exploit. Keeping systems updated helps prevent malware infections and cyberattacks.
3. Strong Password Policy	Encourages users to create complex and unique passwords, making accounts harder to compromise through brute-force or password guessing attacks.
4. Conduct Employee and Student Security Awareness Training	Educates users about phishing, social engineering, and safe online practices, helping to reduce human error.

5. Perform Regular Data Backups	Ensures important data can be recovered quickly after hardware failures, ransomware attacks, or accidental deletion.
6. Install and Maintain Antivirus/Endpoint Protection	Detects and blocks malware before it can damage systems or steal sensitive information.
7. Implement Role-Based Access Control (RBAC)	Grants users access only to the information required for their role, reducing the risk of unauthorized access or insider threats.
8. Deploy Firewalls and Network Monitoring Tools	Helps detect suspicious network activity, blocks unauthorized connections, and protects the college network from external attacks.
9. Conduct Regular Security Audits and Vulnerability Assessments	Identifies security weaknesses before attackers can exploit them, allowing timely improvements to the security posture.
10. Develop an Incident Response Plan	Ensures the college can quickly detect, respond to, and recover from cybersecurity incidents, minimizing downtime and data loss.

Conclusion :

Implementing these security recommendations will strengthen the college's cybersecurity posture, protect sensitive information, reduce the likelihood of successful cyberattacks, and ensure the continuity of academic and administrative operations.
